

Kaipara District Council Treasury management

Presentation by PwC Treasury Advisory
Alex Wondergem - Partner

11 June 2020

Introduction

Introduction

Thank you for the opportunity to present

- Independent and impartial treasury adviser to Council.
- We've been providing independent and tailored treasury advice to the sector since 1997.
- We are presently retained by 35 council clients.

Structure of presentation

This presentation sets out:

- Considerations relating to external credit ratings.
- Funding and interest rate risk positions.
- Key Treasury Policy changes.

1

External credit ratings

Credit rating considerations

- In considering the use of a credit rating, there are two main considerations for Council:
 - Will economies of scale relating to new debt refinancing activities outweigh the cost of the credit rating?
 - Are the disciplines of increased management, governance, public scrutiny and reporting associated with the ongoing maintenance of a credit rating justified?
- Currently, 29 New Zealand Councils are formally credit rated, of which 23 are rated by Standard and Poor's (S&P) and 6 by Fitch Ratings.

- **Key benefits:**

- The LGFA differentiates lending margins between councils that are credit rated and those that are not.

Rated AA	0 basis points p.a.
Rated AA-	5 basis points p.a.
Rated A+	10 basis points p.a.
Unrated	20 basis points p.a.

- Provides an independent opinion of credit worthiness, financial strengths and weaknesses
- A credit rating can promote greater financial discipline and awareness of Council's risk appetite
- Provides a framework and boundary for risk tolerance (i.e. if a certain decision is made, will this have an adverse impact on Council's credit rating?)
- Help Council to focus on risks and behaviours such as forecasting achievability of budgets

Credit rating considerations (cont.)

- Consideration should be whether the cost of a rating can be offset by the savings achieved within the funding portfolio.

Rating agency	Current approximate initial rating fees	Current approximate ongoing annual analytical surveillance fees
S&P	AUD51.25k / NZD55k	AUD51.25k / NZD55k
Fitch	~NZD45k	NZD45k

- Scenario example to demonstrate cost savings**
 - Council will obtain at least a 0.10% p.a. benefit on new term borrowings with the LGFA through obtaining a credit rating (i.e. as per the table on the previous page).
 - Based on \$50 million of term borrowings, this would result in a \$50,000 p.a. benefit.
 - The above demonstrates the minimum saving if Council were to achieve a A+ rating.
 - If Council were to achieve a AA rating, a 0.20% p.a. benefit would be achieved providing an annual interest cost saving of \$100,000.
 - The above example is for illustrative purposes only and the actual realised benefits would depend on Council's actual rating outcome.
- Council has a \$25 million borrowing maturity in May 2021 which requires refinancing which would be able to be obtained at a lower cost of borrowing through the LGFA were a credit rating obtained.
- Note that to achieve a break even cost and assuming a Fitch credit rating of AA- is achieved, a minimum amount of new and or refinanced debt of \$30 million in the 12-months post obtaining the credit rating is required.**

Credit rating considerations (cont.)

- In making a decision as to whether to progress the process to obtain a credit rating or otherwise, Council must also be cognisant of the \$220 million of 'shovel-ready' projects which have been put forward for consideration with Crown Infrastructure Partners (CIP).
- Where these projects are able to be financed through a grant or debt which remains on the Crown's balance sheet, Council's need for external debt raising will be reduced.
- Council should also contemplate the possibility that only a portion of the \$220 million requested will be funded by CIP and further external borrowings will be required to be obtained through the LGFA.
- These potential impacts on external debt financing requirements could mitigate or enhance the financial benefits which can be procured were Council to obtain a credit rating.
- The credit ratings process (a 4 - 8 week timeframe):
 - A lead analyst will be assigned to Council who will evaluate Council's creditworthiness.
 - Information will be obtained by published information, from interviews and discussions with management and Councilors.
 - The information received will be assessed against the ratings criteria relevant for the sector.
 - The analyst will take the information gathered to a rating committee and recommend a rating. The rating committee will assess the recommendation and vote on a credit rating.
 - This will then be fed back to Council who will have a chance to correct any false information.
 - Once this is complete, the rating will be published and Council can use this to source more attractive funding costs for long term debt.

Key Treasury Policy Changes

Key Treasury Policy Changes

- Two main amendments recommended:
 - Updated interest rate risk control limits
 - More flexible funding maturity control limits

- Rationale for proposed changes:
 - Greater level of flexibility in the management of interest rate risks and debt refinancings
 - Recognition of structural shift lower in interest rate settings
 - Increased access to long dated financing and with greater ease
 - Ensuring economic decision making is fully supported

- Areas considered when recommending changes:
 - Council is a prudent financial manager.
 - Governance and oversight of intergenerational assets.
 - Statutory and financial objectives
 - Avoiding adverse interest rate related increases to rates and desire to maintain overall interest costs within budgets.
 - Stress-test scenario modelling to identify the best “all-weather” policy framework

Thank you.
